YPG museum tells dramatic 70 year story

By Chuck Wullenjohn

Tucked away on Yuma Proving Ground's main administrative area is a building constructed in 1947 as the installation's headquarters. Used for that purpose for many years, it now is home to YPG's Heritage Center Museum, a place where an extensive amount of frequently little-known history is on display. Professionally designed and constructed, exhibits in the museum portray the unfolding of YPG's history that began in 1943 and continues today.

The first attempts at a YPG museum began in the late 1990's and over the years it has developed into a thoughtful gem. Exhibits use original photos and artifacts

to dramatically portray a colorful, fascinating story.

From the former Italian prisoners-of-war who constructed pontoon bridges over the Colorado River during World War II and the tens of thousands of hardy infantrymen who trained amid harsh desert heat before entering the heat of battle, to the people who fired a scientific projectile from a specially designed artillery piece 111 miles above the earth and today test a tremendous variety of weapon systems used around the world, YPG's story is truly sweeping.

Heritage Center Director Bill Heidner has worked within the Army's museum system as a government civilian for 16 years, before

that serving 22 years in the cavalry. He says the museum annually attracts between five and six thousand visitors, with the highest volume coming during the winter.

"Our busiest months are between January and April," said Heidner. "Some recent days have seen numbers of 140 people per day

visiting the museum." He attributes this success partly to the quality of exhibits but also to the outreach activities he performs and to organizations downtown that tell people about the Heritage Center.

"We have brochures in numerous locations and the Yuma Visitors Bureau folks always tell people

about us," he said with a smile. Heidner visits school classrooms throughout the year with the goal of building enthusiasm among young people in science, but also visits local organizations to give presentations on a variety of topics, from the U.S. Army Camel Corps of the 1850's to the Japanese-

Commuters can get extra cash by vanpooling

John Andoh

Imagine driving to and from work every day for pennies on the dollar. Employees can do that, thanks to the YCAT Vanpool subsidy program.

The YCAT Vanpool Subsidy provides eligible employees – a subsidy for costs incurred if using a qualified YCAT vanpool partner for transportation to and from their residence, with the goal of taking cars off the roads to reduce traffic congestion and air pollution. With a total monthly maximum benefit of \$300 per vanpool, eligible means of transportation include vans serving customer groups 7-15.

The Yuma County Intergovernmental Public Transportation Authority (YCIPTA), operators of Yuma County Area Transit, formed (YCAT) Vanpool to provide an extension of public transit services when it is not cost effective to operate a fixed route bus route. YCIPTA contracts with two providers for YCAT Vanpool; vRide and Enterprise Rideshare.

YCAT Vanpool uses contractors to provide a van that covers maintenance, insurance, safety training, emergency roadside assistance, guaranteed ride home, fuel and other essential services. All employees have to do from there is develop their own commuting route that best fits their needs.

“Twenty-two employee groups in Yuma County are currently using the service to get back and forth to work at less than \$0.10 per mile,” Ted Abeyta, a representative with vRide, said. “They’re not putting miles or wear and tear on their car, but rather, are able to keep that money in their pocket. The \$300 they receive from YCAT Vanpool, the discounted vans and Ridesharing savings, now goes back into their paycheck which goes directly back into their household.”

Van pools are created based on area of need, such as five people commuting from the Somerton area. vRide compiles information from interested drivers, and once enough participation is in place, a pool is formed and riders

are given a luxury passenger van, complete with reading lights, captain’s chairs for each rider, and in some cases, Wi-Fi.

“It doesn’t matter where they’re coming from, we’ll help to put everybody in groups, or if they already have a group of people who live near them, they can start their own group,” Abeyta said.

Members of each pool determine the best meeting location and departure time, such as a parking lot, and are responsible for driving the van to and from work. All drivers must submit to a motor vehicle report and complete an online driver course. Riders may opt out of driving responsibilities. All approved drivers receive a set of keys.

“That way if somebody has a furlough day, or somebody is on vacation or is running late, somebody else has a key, so there’s no absenteeism or tardiness,” Abeyta said.

In an emergency or unexpected circumstance, YCAT Vanpool provides individuals with a ride home.

YCAT Vanpool contractors monthly rent, covers fuel costs and maintenance for the vehicle – if there is a problem, riders can take the van to a local service provider – and riders simply pay their portion of the bill every month with a payroll deduction, check, debit or credit card specifically for their transportation uses through the YCAT Benefit Program. To see cost savings, individuals should ride in their pool at least 50 percent of the time, essentially two to three times a week.

“Due to the subsidy, and other employer incentives, it’s possible to ride to work for free every day,” Abeyta said. “A lot of people look at it as they’re getting the subsidy as an extra paycheck. They’ll be able to put that money back into their household. That’s almost \$5,000 a year that they can now use for family versus commuting.”

To learn more about YCAT Vanpool, visit www.ycat.az.gov or call 783-2235.

MUSEUM

FROM PAGE 1

American Relocation Camps of World War II.

He feels his job is a great responsibility, for it involves managing the history of YPG, functioning both as caretaker of its history and heritage and also a presenter. “This is serious business, but it’s also fun – some great things have taken place at YPG over the years and I love talking about it.”

Heidner says there is something many visitors tell him that produces his best feeling of gratification. “When people depart the museum and tell me ‘I had no idea,’ it means a great deal,” he said. “That statement has a double-meaning. It means they didn’t know that a particular thing or event happened at YPG, but it also means they enjoyed their museum

experience.”

The YPG Heritage Center Museum is a living, breathing entity that will always change. Some exhibits will be freshened over the years and others will be replaced. History is still being created on YPG’s test ranges and tomorrow’s story is yet to be recorded and told.

There is no cost to visit the museum. It is open Tuesday through Friday each week between 10 a.m. and 4 p.m. The phone number is (928) 328-3394. Special arrangements are made for school groups, and clubs and other organizations are welcome. Heidner is happy to make arrangements for group visits outside working hours when necessary. Please call to arrange these visits. He is happy to make presentations in the community when requested. Other YPG speakers are available through the YPG Public Affairs Office. Call (928) 328-6533.

Predicting weather conditions essential

Meteorologists critical to CRTC testing

By Mark Schauer

Extreme weather testing cannot be accomplished without meteorologists.

U.S. Army Cold Regions Test Center conducts a wide variety of military equipment testing amid some of the coldest, most extreme temperatures imaginable. Testers look at the ranges as giant natural laboratories, and need accurate, specialized weather predictions to conduct virtually any test that takes place.

"Many of our tests have unique temperature requirements and our locale provides a variety of microclimates," said Richard Reiser, test officer. "With the met team's accurate forecasting, we're able to make range adjustments to maximize the benefit for each customer. If it wasn't for the team's skill in telling us 24 to 48 hours in advance about specific

weather conditions, we couldn't make those adjustments."

The microclimates across CRTC's test ranges can see temperature differences of more than 40 degrees, and variations in snowfall as much as six inches. As CRTC test officers move test locations to find the coldest locations, the met team can follow along in a mobile unit made from a disused trailer left over from a past test.

The CRTC met team boasts two meteorologists, Dan Wozniczka and Caleb Schulte. Wozniczka came to the installation from Texas seven years ago, while Schulte, a native of

Missouri, has worked there for five years.

"Our primary job is to do the forecast," said Wozniczka. "I handle the short term portion of it, and Caleb does the long term. The primary things we collect are temperature, humidity, barometric pressure, visibility, wind speed and duration, and solar radiation."

In addition to the extremes that exist simultaneously at different parts of the range, there are also extreme fluctuations over time: there can be nearly 100 degrees difference between the coldest and hottest seasons, and even extreme variations day-to-day in winter.

"We get some crazy extremes," said Schulte. "This past November, because of the Chinook winds, the Bolio complex went from the minus 50s to plus 40 degrees within 39 hours."

The challenge of accurately predicting such mercurial weather conditions doesn't faze the team, though.

"Having a challenging forecast is what makes it fun," said Schulte.

Mornings begin early in all seasons with the launch of a weather balloon to measure wind conditions aloft.

"If we have light winds, then the temperature is very dependent on

what the cloud cover is going to do," said Wozniczka. "If we predict overcast and it's clear, we're going to radiate all that heat into space and drop 20 or 30 degrees colder than we expected. The cloud cover acts like a blanket."

The team maintains about 15 weather stations across the range, which isn't always an easy task: Sometimes the extreme weather the team predicts can be hazardous to their equipment, with fierce winter winds claiming everything from inexpensive wind birds to a satellite dish that collected data from the National Oceanic and Atmospheric Administration.

The team looks forward to replacing an existing weather radar system with a \$1.9 million upgrade that will be the only one of its kind in the 100 mile distance between CRTC and Fairbanks. The weather data the new radar collects will be shared with the University of Alaska in Fairbanks, and thus lead to more accurate forecasting for the entire region.

"It will give our testers a little bigger window of opportunity," said Garry Garner, senior electronic technician. "It'll save money by reducing the time people are standing by."

Caleb Schulte is out collecting temperature readings to include humidity, wind speeds, and solar radiation as well.

Volunteers needed for Highway 95 clean-up

This year the Arizona Department of Transportation (ADOT) Adopt-A-Highway cleanup of a section of Highway 95 will occur on April 17 (Thursday) from 8 a.m. to 11 a.m.

Folks wishing to participate can meet at the parking lot side of Building 2100 at 7:30 a.m. We will then all hop into a bus delivering us to the cleanup site along side of Highway 95. Safety vests, trash bags and gloves will be provided. There will be a safety briefing at the site.

Bottled water will be available at cleanup locations as well as additional government transportation

for any emergencies that might occur.

Trash-filled bags will be left on the side of the road for ADOT pickup. ADOT rules preclude children younger than 12 years of age from participating and cleanup shall not be performed within 6 feet of the roadway. More information will be included in the safety

briefing.

If you would like to volunteer or require any additional information, please contact Mike Stover (5003) or Charles Ruerup (2977). Hope to see you on ADOPT-A-HIGHWAY CLEANUP day!

SAFETY CORNER

Now, let's focus on snakes

Submitted by Safety Corner

Many of us are under the impression that venomous creatures found in the desert are only active when the weather is warm. Well, let me share with you the weather has changed enough for snakes to be active. They are part of our ecological system. Several have already been spotted.

I ask that you "dust off" your plan of action and put it into place (i.e., supervisors ensure it's part of your daily safety briefing; workers ensure you survey your area, under your vehicle, tool box, etc).

If you need help, telephone FSI (help desk at 3005) for removing a snake from your area. They are trained to handle snakes. After duty hours, contact the Directorate of Emergency Services at 2720. They will make the arrangement for removal.

BOTTOM LINE ... STAY AWAY FROM THE SNAKE.

Listed below are web sites: one from AZ Game and Fish and the other from Desert USA, about snakes in the Arizona desert.

By the boards: CRTC lead an intramural b-ball star

By Mark Schauer

In professional basketball, big centers like the legendary Kareem Abdul-Jabbar, Robert Parrish, and Dikembe Mutombo all played the rigorous game into their early 40s.

It may not be the NBA, but Digital Underground, one of eight teams in the intramural league at Alaska's Fort Greely, relies on an ageless 49 year-old, 6'4" center to anchor their team's formidable defense.

"As you can well imagine, being a remote and isolated post, this is a big draw," said Lt. Col. Brian Speas, Fort Greely garrison commander. "Intramural basketball is a very big event on the base and everybody looks forward to it."

Digital Underground's franchise player is none other than Cold Regions Test Center commander Col. Chuck May, and more than one of his teammates is willing to rave about his contributions to the perennially contending squad.

"He's the best rebounder in the league and also has the best attitude," said Justin Reardon, recreation aide, who coaches the team. "In this league, the best thing you can do is rebound."

"His hustle and his ability at defense is pretty good," added teammate Speas. "He's pretty good on the boards, has offensive talent, and he's got the coolest shoes on the court."

The intramural league has referees and officials, and keeps official standings throughout the season, which runs from the darkest days of winter into the spring. Capped by a round of playoffs, May's late addition to the team last season catalyzed an unexpected playoff run. Memories of the late season hot streak served Reardon well as he assembled the

PHOTO BY MARK SCHAUER

Digital Underground's franchise player is none other than Cold Regions Test Center commander Col. Chuck May.

current season's squad.

"Putting him on the team helped me recruit some of the best players in the league, including a guy who scored 35 points per game last year," said Reardon.

Officially the oldest player in the highly competitive league, teammates and opponents alike refuse to believe that May is approaching the half-century mark.

"I think he just has a good disguise," said Reardon. "His fitness level is not that of the average 49 year old."

"He plays like he's about 21," added Speas.

Airshow 2014

YPG static display attracts thousands of visitors

(PHOTOS BY MARK SCHAUER)

The UH-1 "Huey" helicopter was an iconic airframe of the Vietnam War, and continues to serve the mission at YPG every day.

Heritage Center curator Bill Heidner (above right) had a variety of replicas of vintage Army small arms on display for all to see and touch. At left, Staff Sgt. Cherica Ibarra (left) and Sgt. 1st Class Matthew Prager let a young visitor try on a parachute and oxygen mask like they use on a daily basis.

Munitions and Weapons test officer Richard Bloomfield (left) showed the latest variant of the 105mm M119 howitzer to thousands of visitors, including these two Marines.

An air show wouldn't be complete without unmanned aerial systems, and test officer Matthew O'Donald (left) brought two: the Silver Fox (rear) and the Aerosonde (foreground).

CRTC test officer once an infantry officer

By Mark Schauer

Wherever they serve, YPG test officers work to ensure that the equipment Soldiers depend on works as it is supposed to.

It's an important job, and one that is particularly meaningful to test officers who themselves served in uniform. One such test officer is U.S. Army Cold Regions Test Center's Isaac Howell, a five year veteran of the test center who previously served for over 10 years in uniform, including a deployment to Iraq as an infantry officer in 2008-09.

"Just having the experience from being in the Army and knowing what the Soldiers actually go through helps enormously when you are actually testing systems," he said. "Obviously, the laboratory is far different than real life: In the laboratory, you control the input variables and everything about the system under test. When you put that piece of equipment in a Soldier's hands in real life, you have a completely uncontrolled environment that has all sorts of variables and the potential for that equipment to act very differently."

Born in Alaska, Howell was living in Boise, Idaho when he signed up to serve in 1998.

"My brother and I were going to join the Peace Corps to go to Africa, but I was 17 years old and realized you had to have a degree to join, so we joined the Army. He joined active duty and I joined the reserves because I wanted to go to college."

Intending to eventually go to medical school, Howell pursued a degree in biology and neuroscience at Montana State University, transferring from the Army Reserve into the National Guard along the way. He was commissioned as an officer upon graduating, and went

on active duty. He was attached to a Stryker brigade at Fort Wainwright, Alaska, from where he deployed to Iraq.

Howell was proud to serve, but felt torn by long separations from his family. He decided to leave the service, and as he was out-processing, he heard about CRTC through the Army Career Assistance Program. He met CRTC technical director Jeff Lipscomb at a job fair at Fort Wainwright, and shortly thereafter was excited to get an interview.

"I wanted to continue to serve in some capacity. The Army was very good to me and I wouldn't trade it for anything, but I love the job I'm in now."

Having spent part of his childhood in Alaska, the extremely cold winters didn't deter him from taking the job.

"I always loved Alaska and wanted to come back. I like the environment and the cold weather, and I like helping Soldiers. I appreciate what they do and what they and, especially, their families sacrifice."

These days in his spare time, Howell enjoys outdoor activities with his wife and five children and feels grateful to be part of helping Soldiers get gear that works, whether they know of his efforts or not.

"I didn't know acquisition existed when I was in the Army. You knew you received stuff and that the Army purchased stuff, but neither I nor the average Soldier had any idea about the acquisition corps and the actual process the Army goes through for acquiring materiel."

His firsthand knowledge of being both an enlisted private and an infantry commander gives Howell real-world insight into items under test that other testers may not think of. For example, a laser sighting

(PHOTO BY MARK SCHAUER)

Isaac Howell, a five year veteran of the U.S. Army Cold Regions Test Center, previously served for over 10 years in uniform, including a deployment to Iraq as an infantry officer in 2008-09.

system being tested in the extreme cold worked as expected while mounted to a tripod, but returned inaccurate grids when in the hands of a cold, fatigued Soldier. This is information a field commander in theater would need to know to

successfully complete a mission.

"It means a lot to me to have an impact on just the equipment they're going to get, and having the experience of being a Soldier and using that to try to make their lives a little easier."

CHAPLAIN'S CORNER Fare Thee Well

By Chaplain (Maj. Douglas Thomison)

Good day Yuma Proving Ground. In the military we look forward to welcoming as well as saying goodbye to those arriving and departing our units or installations. A long standing military term and event utilized to receive and send-off people serving in or for the military is the "hail and farewell." Hail and farewell gatherings typically take place when one is moving (permanent change of station/PCS) or retiring.

The hail is a great way to get an individual and his or her family off to an excellent and supportive start. There is typically a formal portion of the event as well as a casual time where family members, hobbies, pets, etc. are introduced. The hail lets one know that he or she belongs to a team and community connection is important.

There is also the farewell. Conveying a formal goodbye is imperative because the military

community desires to pay tribute to and affirm those who have faithfully served. At times the farewell seems somber because it is seemingly final and you may not see that valued person again.

Similar to the military farewell, I want to take the opportunity to say goodbye to our "Winter Visitors." The YPG Chapel and installation will sure miss our special guests. They are truly an important part of YPG. However, what differs from the military farewell is that many of our winter visitors will return next fall or winter. Thus, we will miss you, but only for a short while. Thanks for being yoked with us for a wonderful autumn and winter season and we will see you again in the not too distant future. And now may "The Lord bless you, and keep you: The Lord make his face shine upon you and be gracious to you; The Lord turn his face toward you and give you peace." (Numbers 6:24-26) Fare thee well! Have a blessed day!

Understanding Sexual Assault

Anyone can be a victim of sexual assault. Sexual assault impacts hundreds of thousands of people each year in the United States from all ages, genders, races, ethnicities, class, sexual orientation, gender identity, and backgrounds. The effects of sexual assault can last a lifetime, rippling out to family members, school, work, communities and down through generations. There is no one kind of person sexual assault happens to.

Sexual assault is an umbrella term that includes a wide range of victimizations. It occurs when a person is forced, coerced, and/or manipulated into unwanted sexual activity. It can include completed or attempted attacks and it may or may

not involve force and threats.

Sexual assault is part of a range of behaviors that offenders use to take power from their victims. It can begin with words, gestures, jokes, alcohol and intimidation. It can progress to coercion, threats, force, and actions that involve or manipulate an individual into any unwanted sexual activity.

Sexual assault is not about sex. It is about force, manipulation, exploitation, violence and exerting power and control over another person. Perpetrators use sexual assault as a weapon to humiliate and dominate others.

Safety Award presented to four employees

During the Commander's Safety Award ceremony last month, four members of the workforce were presented with Commander's Safety Certificates. Not in this order, they are: Evan G. Vincent, Quality Assurance (QA) inspector of the Maintenance Division, was extremely instrumental in ensuring a safe fleet of equipment was in operation. His dedication to duty and continued attention to detail ensured high levels of QA inspections resulted in significant reduction of safety deficiencies during the reporting period. Over 1,500 pieces of YPG's fleet, resulted in minimal to no negative impact on mission requirements while meeting OSHA standards; William Stuart was recognized for his attention to safety, dedication to duty, and to daily providing a safe operating environment for the YPG workforce. Stuart recognized a serious road condition which could potentially injure people, and damage equipment. His actions of notifying the proper authorities for road hazards, directly impacted the safety of everyone in the work areas and local community; Monty Ahales, equipment specialist, came across an APS crew constructing a road on YPG property, and turned out, they were there without permission. He realized the possible unsafe implications of this road placement, and brought it the management's attention. Monty contributed to ensuring safety of personnel by putting a stop to APS utilizing our access road; Ramon Moreno of the Munitions & Weapons Division was recognized for spearheading the effort to design, fabricate, and install a device to prevent fragments from entering the armored personnel carrier during Area Denial Artillery Munition (ADAM) mine evaluation. During the test, a fragment was observed entering through the nearly non existing gap between the rod and pivot ball, causing a minor injury to an Ammunition Recovery technician. A design was fabricated and improved over the course of the test. As a result of his efforts, the test resumed and the safety of personnel inside the APC dramatically improved for the remainder of the test, thus introducing a safer tool for use during future ADAM projectile tests.

2014 Yuma County Science Expo Judges Needed!

Please join us this year.

Last year, our community joined together and many volunteers were willing to take time to help judge Yuma County student science projects.

We need your support again this year – please join us!

**AWC Schoening Conference Center, Friday, May 2, 2014
@ 8:00 am.**

You will be treated to a continental breakfast while the new judging information is introduced and later in the day, lunch will be offered.

I will send more reminders out as the Expo draws near, but if you would like to RSVP early, please email me, Julie Rodriguez,
jrodriguez@apscc.org

Tips For Healthy Living

**Submitted by Paul J. Kilanski,
Army Community Service,
Master Resilience Trainer**

Feeling down? Feeling like you just don't get things as quickly as you used to? An insufficient amount of Omega-3s in your diet may be the culprit. You've probably already heard that Omega-3s can reduce your chances of heart disease and cancer, but did you know that they've been proven to improve both mood and cognitive abilities?

There are three different types of Omega-3s. The most well known of the three, Omega-3 ALA, comes from certain plants and seeds like flax, chia seeds and almonds. Diets rich in Omega-3 ALA sources (like Mediterranean diets) "assist" in eliminating disease like heart disease and certain types of cancer. But Omega-3s lesser known counterparts, DHA and EPA, have been proven to be just as valuable in improving quality of life because Omega-3 DHA and Omega-3 EPA are critical components in brain health. Soldiers who have increased their consumption of Omega-3s DHA and EPA have reported noticeable

improvements in their cognitive abilities and mood after just 4-6 weeks.

There are a couple of different sources you can use to increase your Omega-3 DHA and EPA levels. Increasing your consumption of oily fish is one way. Tuna, trout, mackerel, and salmon all contain high levels of these fatty acids. Not a fan of fish? Fish oil supplements are a viable alternative—just ensure that you're getting enough, and that they're the right type. When using fish oil supplements, always check the fish oil supplement "nutritional label" on the back of the bottle and look for the Omega-3 EPA and DHA content. Be sure to read the serving size so you know what is in each capsule. You want to get a high level of Docosahexaenoic acid (DHA) and Eicosapentaenoic acid (EPA) while balancing the cost of the product. Always look for high quality and high quantity. And finally, make sure that you're getting 2-3 grams of each every day, even if it means taking several softgels. *(Taken from the CFS2 Quarterly)*

VIEWPOINTS

Spring has sprung all over the northern hemisphere, but conditions at U.S. Army Cold Regions Test Center are much different than in Yuma... overnight lows are still routinely below zero degrees, and daytime highs may or may not rise above freezing. Nonetheless, we asked members of the CRTC workforce what their favorite springtime activities are.

Jennifer Lawless
Technical editor

My favorite thing to do in spring is canoeing down the Clearwater River: It is one of the most relaxing and beautiful float downs you could imagine. We also plan on raising chickens and turkeys again this year, so very soon it will be time to stock up the chicken coop with baby chicks.

Meteorologist

I enjoy going to the World Ice Art Championships in Fairbanks early in the springtime to view the ice sculptures. I also enjoy floating down the Clearwater River later in the springtime, just after the ice begins breaking up from the local waterways.

Caleb Schulte
Meteorologist

I enjoy snow machining in the early spring. I've only done it once so far, but it was a blast! Later in the spring, I like breaking out the all-terrain vehicle and kayaking down the Clearwater river.
